Request For Statements Of Qualifications

For Engineering Services

Woodin Avenue Bridge Pedestrian Crossing Structure

The City of Chelan is requesting Statements of Qualifications to provide engineering services to determine the feasibility of constructing a pedestrian walkway on the outside of the existing Woodin Avenue Bridge. The study is meant to consider a cost effective alternative to the existing plan to remove and replace the bridge deck. The Woodin Avenue Bridge is a concrete "T beam" structure constructed in 1927 and is 458 feet long. Drawings and relevant information are available to interested parties on this website and at the Public Works Department, 50 Chelan Falls Hwy, Chelan, WA.

The scope of work will include the following elements;

- Determine the feasibility of constructing pedestrian walkways on the outside of the bridge, on both sides.
- Provide alternatives and recommendation on appropriate building materials for walkway.
- Provide information and recommendations on methods to retain the architectural character of the bridge.
- Provide cost estimates for any alternative identified.
- Provide all above information in a manner that could effectively be used as an amendment to or replacement of the current 2004 Woodin Avenue Bridge Rehabilitation Feasibility Study.
- Provide information on any available grants and/or financing options applicable to this kind of project.

All interested parties are to provide two copies of relevant information as to their qualifications and experience in bridge design generally and to external retrofitted pedestrian walkways specifically, as this will be the primary consideration in choosing a consultant. Please be as brief as possible in your statements of qualifications, focusing on the above criteria. Statements will be accepted until March 10, 2010. Send to:
